AgriThread — Full-Stack Agricultural Platform (MVP) Next.js, React, TypeScript, Node.js, Express.js, PostgreSQL, Prisma, Redis, BullMQ, Socket.io, Google Maps API

- Designed and shipped a multi-role full-stack platform (Farmers, Businesses, Professionals, Government) with modular API architecture using Node.js, Express, and Prisma ORM
- **Social Media Feed:** Engineered a multi-role social platform and designed a ranking algorithm that scores posts based on author trust metrics and real-time engagement velocity, featuring built-in time decay and anti-spam protection..
- **Job Portal:** Developed an agricultural job matchmaking portal with advanced search query filtering, job bookmarking, and candidate shortlisting.
- **B2B/B2C Marketplace:** Architected a commerce network supporting bulk produce and service listings, integrating an **Auto-Quote Generation** system and interactive negotiation workflows.
- **AgriMap (Geospatial Finder):** Integrated **Google Maps API** with coordinate-based marker clustering to map local farms, business centers, and experts geographically in real time.
- **Real-time Chat:** Built a low-latency chat engine using **Socket.io**, scaling it horizontally across multi-node server clusters using **@socket.io/redis-adapter** for group and direct messaging..
- **ATS CV Builder:** Developed a dynamic resume-building tool utilizing client-side **React PDF Renderer** and backend **pdf-lib/pdf-parse** to generate and download standardized resumes.
- **Mandi Price Analytics:** Integrated public commodity rate APIs, visualizing historical market trends, price fluctuations, and crop-specific comparisons utilizing responsive **Recharts** visualizations.
- **Ads & Boosting Engine:** Programmed a monetization system featuring sponsored content boosts and banner ads, processing secure transactions with a **Razorpay** payment gateway integration.
- **Role-Based Activities Tracker:** Designed granular Role-Based Access Control (**RBAC**) and activity metrics tailored for Farmers (crop logs, yield estimates), Agribusinesses, Experts, and Government officials.
- **Team Dashboard & Lead Pipeline:** Built a collaborative CRM module allowing organizations to assign tasks, manage team permissions, and ingest sales leads via WhatsApp, phone, or marketplace inquiries.

FullStack Developer

Jan 2025 - Present

Freelancing

- Developed a responsive resume/CV builder web application using React.js, Node.js enabling users to create professional resumes across multiple device formats
- Implemented PDF export functionality allowing users to generate and download resumes in PDF

- Developed backend apis ensuring seamless data persistence and user resume management
- Developed multi-template system with 8+ professionally designed resume templates, allowing users to switch layouts dynamically without data loss
- Built file manager dashboard allowing users to create, duplicate, edit, and delete multiple resume versions for different job applications
- Optimized application performance through code splitting and lazy loading, reducing initial load time and improving overall user experience

FullStack Developer

Hashtag Systems

Ring Of Hires

- Designed and implemented interactive map-based job search features using React.js and Google Maps API, optimizing UX and reducing API response times by 40%.
- Built reusable UI components with React.js and TailwindCSS for better maintainability.

LogX (React Native iOS APP)

- Led development of the LogX iOS app (React Native), including QR code scanning and high-performance listing UI, increasing package scanning efficiency by 50%.
- Developed UI Components for listing , filtering, sorting of packages for smooth User Experience.
- Developed and Implemented Custom Modal with listing to improve application Performance.

FullStack Developer

Dec 2021 - May 2022

Truscholar

<https://www.truscholar.io/>

- Contributed to the TruScholar Web Application by developing key backend features using Node.js, Express.js, and React.js to enhance scalability.
- Implemented a bulk download feature using Bull.js, a Redis-based queue, for CPU-intensive tasks, improving task efficiency by 30%.
- Built and integrated Razorpay payment module with webhook handling, contributing to a 20% increase in transaction success.

Engineering Intern

Jun 2021 - Dec 2021

Truscholar

- Designed and implemented certificate templates, increasing engagement and customer response.
- Created responsive UI components in React.js to optimize the user experience.
- Researched Certificate Designer Projects based on JavaScript to improve project efficiency.
- Documented user workflows using Draw.io for improved team clarity and onboarding.

Projects

VerifyCertify

<https://certify-nu-two.vercel.app/>

- Led design and development of a blockchain-powered certificate verification system with role-based access for admins, organizations, and learners.
- Utilized Next.js, MongoDB, and Solana Blockchain for secure, verifiable certificate issuance.

- Developed a verification system that reduced certificate validation time by 90% compared to manual methods
